

## Maximize the Value of Your CMS by Syncing with eWatch

eWatch subscribers have a competitive edge among firms working to streamline their practices and make the most of their legal technology investments. Stay a step ahead, leveraging automated updates for improved productivity and billable tracking.

Automation is key for law firms seeking greater efficiency in their work process. Why risk critical case updates falling through the cracks whether due to firm downsizing, human error, staff turnover, illness or even severe weather that keeps people out of the office? Get all the case updates you need automatically added to your firm's case management software (CMS) when they occur and without the potential for clerical data entry errors when you sign up for eWatch.

eWatch is integrated with these CMS partners:

## What Is CMS Sync and How Will it Benefit You?

The CMS Sync feature for eWatch automatically updates your firm's case management software when there is any change on your case. It eliminates the need to manually enter updates from email alerts, preventing errors and saving valuable time. CMS Sync's automated process is essential to never having to miss a future appearance, knowing in what part the appearance is scheduled to take place as well as learning ahead of time what cases were adjourned or decided.

eWatch will synchronize with your CMS so you seamlessly receive any change to:

- Case status
- Decisions
- Attorneys
- Motions
- Calendar updates
- Parties
- Judges' information
- Appearances

Case tracking expenses are generally reimbursable, making CMS Sync an even greater value for eWatch subscribers.

Using the latest technology to forward docket information, eWatch seamlessly integrates with both proprietary CMS platforms and popular off-the-shelf products, including:

- SmartAdvocate®
- TrialWorks™
- LexP.I.
- Time Matters®
- Needles®
- Selah Central®
